

2a. The artifact that I am representing is an xbox one console by microsoft. This xbox console is a station that entertains all people even young kids or parents. They've taken this to the next level with better quality. You can watch movies and even stream on the xbox one. This console even comes with wireless or wired headsets for you could communicate with other players online by just connecting to the controller. This console is a joy for all people and till this day is still growing and getting better.

2b. I first used a piece of paper to work out the detail on the artifact i created. Then i split my paper in half where i could have my artifact on top and my stats on the bottom where i could explain everything. I then chose some pictures off the internet and drew them onto a piece of paper where i could explain everything and how it works or where each part of the console is. I then added my explanation on the side of the drawing where i explain where everything is and how it works. On the stats i found some interesting graphs on how the xbox one is doing and if it's gonna be growing in the future or not.

2c. A beneficial effect that the xbox one has on society is the entertainment for all the people. It comes with some games for kids that are younger and also a bloody and gore games for adults or action for everyone. Another great benefit the xbox one has is the graphics, these graphics or an outstanding feature for the console with a 4k quality for your tv. So when you're playing a game it would almost look like your looking at real people. You could also experience more fun with the kinect and the voice control. There is also some harmful effect that the xbox one could do for the environment. One bad benefits are that the entertainment is so great that kids are not gonna want to get off the console and just play all day. They won't be able to enjoy their life properly because they are gonna be so addicted to the game. It can also affect more and more people on the way towards the future.

2d. One of the data the xbox uses is 2.5 to a 3.5 storage unit that gives it over 256 GB or 346 GB. It can have quality of 4k which can give you a good experience on how it looks. Once the storage is full you'll have to remove it from the inside to put a new one but can be easily damaged if dropped or something happens.

2d. The privacy in this console is good because its security on the settings is nice and protected from people or hacker or something so you won't need to worry. The bad part is that if your family member knows how to get in your privacy then your done, that's the only bad part
